

San Dieguito Lagoon Committee Attachment assembled Nov, 2009 in response to the 22nd DAA Oct, 2009 DEIR for Fairgrounds 2008 Master Plan

Discharge Point “X” on GDR

From DEIR Section 4.11: Hydrological “Basin 16 consists of the Fairgrounds property located east of Jimmy Durante Blvd within the limits of the City of San Diego....An existing 12-inch riser pipe located in the center of the Basin drains excess flows from this area to the River.”(p.4.11-8 and Fig 4.11.2).

This riser pipe is located in the center of the Golf Driving Range (GDR) on Fairgrounds property east of Jimmy Durante Blvd.

Note golf ball inside screen at the 12 inch riser opening on the GDR.

Note how this pipe opening appears to have been below the surface of the surrounding soil which raises the question of whether the drainage for Basin 16 is effectively infiltration.

The pipe drains into the river about due south of the above opening. For reference, terminus is dubbed “Discharge Point X”.

Note line of golf balls deposited as water flowed from this pipe, Discharge Point "X".

Photographs taken November, 2009. Photographs of Discharge Point X were taken at 3:30pm Nov 16, 2009 during a low tide of about -0.9.
